Of course!

Hi Mark,

For mass spec standards, we are currently using Wellington labs C13-MPFAC-MXA and C13-GenX, but I have been looking for unlabeled versions of the four PFAS in the press release at the end of last year (see table below).

My goal was to find a few grams of each to be used in cell culture treatments. I have had minimal success with the companies I have contacted so far (see excel file for companies). The bullet points below is the summary of where we stand on the 4 novel PFAS mentioned in the press release:

- o Nafion BP 2: Snyquest Laboratories will synthesize
- o Hydro-EVE: Dr. Zhenfa Zhang at UNC is trying to synthesize
- o PFO4OA & PFO5DoDa: Neither Zhenfa or any synthesis company contacted are able to synthesize at this time.
